

PRESS RELEASE

New COO at Alaris Antennas to focus on quality on time

It is with excitement that we introduce a new chapter on the operations side at Alaris Antennas, with the appointment of Jacques Steyn as the new Chief Operating Officer.

Jacques holds a BEng (Electronic) degree from the University of Pretoria, with postgraduate qualifications in military aeronautical engineering, and leadership education. He also brings with him extensive experience in the defence industry, aviation, armoured vehicles, electronics, integrated support systems and manufacturing. In addition, he has a wealth of experience in design, development and application of ILS, support systems and maintenance management.

Not only did the number of years which he spent in the UK with the Ministry of Defence provide him with great experience, but on his return back to South Africa, he served in a senior executive role at Paramount and was later appointed as the Operations Director and Service Centre Manager at Idemia South Africa. Alaris Antennas, based in Centurion, South Africa, designs, develops, manufactures and sells state-of-the-art, specialised broadband antennas and other related RF products used in the communication, frequency spectrum monitoring, testing and measurement, electronic warfare and other specialised markets.

With client centricity being one of the Alaris values, delivery of quality products on time is key. Jacques and his Operations team will play a vital role in the successful delivery of this objective.

Alaris Antennas (Pty) Ltd is part of the Alaris Holdings group of companies, with a global footprint.
